RMV

RING MAIN UNIT

SF₆ Gas Insulated Ring Main Units

Based on maximizing efficiency and reliability of the power technology helps offering optimized solutions for your environment

Susol RMU is enable to install on medium voltage distribution network and mainly used for protection of transformers in compact substations. It is used for medium voltage distribution in compact substations, small buldings, residential housing complex, large shopping malls, airports, wind power, and solar power comprising medium voltage networks.

Certified Quality

STL (The Short-Circuit Testing Liaison, KERI), ISO 9001, ISO 14001 LS has integrated a functional organization into each of its units, the main purpose of which is to check quality and ensure the adherence to standards.

Features

RMV

RING MAIN UNIT

SF₆ Gas Insulated Ring Main Units

Susol RMU is a compact ring main unit combining all MV functional units to enable to supply and protect transformers on the secondary distribution network.

Susol RMU can be supplied in various and different configurations suitable for most switching applications in 12 / 17.5 / 24kV / 36kV distribution networks

Technology

Technology

- Metal enclosed unit for indoor installation and type tested.
- Insulated by SF₆ Gas.
- Maintenance free and easy installation.
- Independent of climate.
- ON-OFF-Earth, 3-position load break switch

Safety

Safety

- Approachable and operable safety in the presence of power in the cables.
- Clear indication of operation status via mimic diagram on front panel.
- Fully automatic interlocking system.
 - Operation is only possible in case door is totally closed.
 - Fuse compartment is only accessible when Load break switch is earthed.
 - Voltage detector to check whether cables are lined or not
- Internal arc withstand is tested for the operator safety in case of accident current occur.

Durability

Durability and usefulness

- Metal enclosed tank is hermetically sealed, it means this is independent of environmental effects such as dirt, small insects, moisture and so on.
- Load break switch operating is possible in the front of Ring Main Unit.
- All switching operations can be made safely to personnel because of interlocking system that operates automatically according to the switch position by the operator.
- No requirement of recharging SF₆ gas until its service life.
- Remote operation available in case of using motor operating mechanism and RTU.
- HRC power fuse will trip the mechanism automatically by a fuse striker pin connected to mechanism in the event of fault happening.

Compact

Saving cost

- No maintenance is required other than replacement of HRC power fuse after installation.
- Compact design that requires minimum space to install and operate locally is main advantage especially where the space is limited.

Remote Control

Network remote control for DAS / SCADA

Equipped with RTU (Remote Terminal Unit), the Susol RMU switchgear can implement intelligent application.

Connecting all the IRMUs (Intelligent RMU) by a communication network, it enable to monitor and control the switchgear remotely, locate and isolate automatically as well as the system recovery.

This will dramatically reduce the affected area and duration of blackout, and realize the high reliability and excellent power quality.

RTU(Remote Terminal Unit)

- Equipped with RTU (Remote Terminal Unit), the susol RMU switchgear can implement intelligent application. connecting all Susol RMU with communication network, it enables to monitor and control the switchgear remotely.
- The remote terminal unit (RTU) collects data from field instruments & sensors and transmits the information to the Supervisory Control and data acquisition system (SCADA) installed in a central control room through communication systems and lines, and receives control commands from the telemeter telecontrol system to conduct online controls in real time.

System configuration

Susol RMU equipped with RTU provides all the functions needed to operate the MV network in real time

Product Types

R: Riser

L: LBS (Load Break Switch)

C: CB (Vacuum Circuit Breaker With Disconnecting Switch)

F: Fuse (Load Break Switch-Fuse Combination)

Ratings

Type : Susol RMU LLCLpx(Extensible type)
 Rated voltage : 12/17.5/24kV
 Rated frequency : 50Hz
 Rated current : 630A
 Rated short time current : 21kA/3s
 Power frequency withstand voltage : 42kV
 Lightning impulse withstand voltage : 75kV
 Internal arc withstand class : AFLR or AFL 21kA/1s
 Applicable standards : IEC 62271-1, 102, 103, 200
 Operating method : Trip coil

Diagram Example

LBS Feeder (L)

L: LBS(Load Break Switch)
 3-position Load break switch rated 630A and less for load breaking and earthing

CB Feeder (C)

C: VCB (Vacuum Circuit Breaker)
 Circuit breaker with 21kA interrupting capacity for the transformer and line protection

Switch-Fuse Feeder (F)

F: Switch Fuse
 (Load Break Switch-Fuse Combination)
 200A switch-fuse combination for transformer protection

- 1 Pressure gauge
- 2 Name plate
- 3 Voltage detector
- 4 Cable compartment
- 5 Ring S/W Earth operation
- 6 Ring S/W operation
- 7 Circuit breaker operation
- 8 Fuse compartment

Configurations Non-extensible RMU

36kV CB module

Standard / Optional features

• Standard features

- Circuit Breaker with 21kA interrupting capacity for the transformer and line protection
- 3-position DS disconnecting and earthing switch
- Switch position indication for CB and DS / ES
- Cable bushing horizontal in front
- Interlocking between CB and DS / ES

• Optional features

- Motor operation for Circuit Breaker
- Auxiliary switches
 - CB position
 - Disconnector position
 - Earthing switch position
- Voltage indicating system
- Trip coil and close coil

Vacuum interrupter

In the closed position, normal current flows through the interrupter. When a fault occurs and interruption is required, the contacts are quickly separated. The arc drawn between the surfaces of contact is rapidly moved around the slotted contact surface by self induced magnetic effects, preventing gross contact erosion and the formation of hot spot on the surface. The arc burns in an ionized metal vapor, which condenses on the surrounding metal shield. At current zero the extinguishes and vapor production ceases. The metal vapor plasma is very rapidly dispersed, cooled, recombined, and deionized, and the metal vapor products are quickly condensed so that the contacts withstand the transient recovery voltage.

※ Note

-51ND(Ground fault protection) normally operates when the sum of the RMS current of each phase measured by OCR is more than

90% of the minimum set value to the direction of P1 → P2 of the connected CT.

-If the sum of the RMS current of each phase at cold state is less than 2 times of the minimum set value, the absolute error of ±200ms should be added to the basic error

Operating characteristic

51T characteristic

The function for overload protection which has definite time characteristic and time delayed in inverse ratio to fault current.

- Pickup current setting Knob: I>
 - Setting range
(0.9-0.95-1.0-1.05-1.1-1.15-1.2-1.3-1.4-1.5-1.6-1.8-2.0-2.25-2.5-NA)*In

Operating characteristic

51D characteristic

The function for over current protection which has a definite time characteristic.

1. Standard current setting Knob: $I_{>>}$
- Setting range: (1-2-3-4-5-6-7-8-9-10-12-14-16-18-20-NA)* I_n
2. Time delay setting Knob: $t_{I>>}$
- Setting range: 0.04-0.07-0.1-0.15-0.2-0.25-0.3-0.4-0.6-0.8-1-1.4-1.8-2.2-2.6-3.0 sec
3. Operation current based on the largest one of the three phases

51ND characteristic

Ground fault protection function provides trip signal at the set values for pick up current and time delay.

1. Standard current setting Knob: $I_E>$
- Setting range :
(0.2-0.3-0.4-0.5-0.6-0.7-0.8-0.9-1-1.2-1.4-1.6-1.8-2-2.5-NA)* I_n
2. Time delay setting Knob: $tI_E>$
- Setting range: 0.1-0.2-0.4-0.6-0.8-1-1.5-2-2.5-3-3.5-4-6-8-10-20 sec
3. Ground fault current = Vector sum of the three phases (R+S+T)

Major components

CT (Current Transformer)

Rating		Specification
Max. system voltage	kV	0.6
Primary current	A	7.2 / 14/4 / 28.8 / 57.6 / 115.2 / 230.4
Secondary current	A	0.075
Rated burden	VA	0.1
Accuracy class		10P80
Short time-current	KA/3s	21
Rated frequency	Hz	50 / 60

Voltage indicator lamps (Voltage Detector)

It is a device to check the presence or absence of voltage in the cables. It is conforming to IEC standard 61958. Push button type LED voltage indicator is provided and lamp power is supplied by bushing type capacitive dividers.

Power Fuse

1. The LS HRC power fuses belong to the PRIME MEC series. It interrupts high currents before the peak value and therefore cuts down the required withstand capacity of the associated equipment on the electric system.
2. Though small in size, it has a high breaking capacity and its enclosed type is suitable for use inside of the panel board.
3. By unifying the size of the connection, it facilitates compatibility and maintenance.

Selection of fuses

: According to IEC
60787(24kV)

Transformer rating capacity (kVA)	Power Fuse rated current (A)
36 ~ 75	5
75 ~ 157	10
172 ~ 358	20
258 ~ 538	30

Transformer rating capacity (kVA)	Power Fuse rated current (A)
464 ~ 840	40
598 ~ 1048	50
745 ~ 1320	63
1000 ~ 1572	75

Note) Please ask fuse maker for optimum selection of fuses.

Power fuse characteristic curve

Optional components for LBS / F-LBS mechanism

1 LBS/F-LBS auxiliary contact

A contact used for remote control of LBS/ F - LBS ON/OFF/EARTH status.
The auxiliary contact consists of 2a2b. (However, when operating an electric motor, it consists of 1a1b.)

12 / 17.5 / 24 / 36kV RMU LBS Auxiliary Contact				
Type		Resistive load		Inductive load
Minimum current		DC5V, 1mA		
Contact capacit	AC	490V	5A	2.5A
		250V	10A	10A
		125V	10A	10A
	DC	250V	3A	1.5A
		125V	10A	6A
		30V	10A	6A

2 LBS motor

With the external power source, it charges the closing/opening spring of LBS

12 / 17.5 / 24 / 36kV RMU LBS Motor					
Rated voltage (Vn)	DC 24~30V	DC 110V	DC 220V	AC 100~130V	AC 200~250V
Load current (A)	≤ 9	≤ 2	≤ 1	≤ 2	≤ 1
Starting current (A)	3 times the load current	5 times the load current			

3 F-LBS motor

With the external power source, it charges the closing/opening spring of F - LBS

12 / 17.5 / 24kV RMU F-LBS Motor					
Rated voltage (Vn)	DC 24~30V	DC 110V	DC 220V	AC 100~130V	AC 200~250V
Load current (A)	≤ 9	≤ 2	≤ 1	≤ 2	≤ 1
Starting current (A)	3 times the load current	5 times the load current			

4 F-LBS trip coil

A device used to trip F - LBS in a remote place; it trips F - LBS by operating the coil when voltage is continuously applied or instantaneously supplied

12 / 17.5 / 24kV RMU F-LBS Trip Coil				
Rated voltage (Vn)	DC 110V	DC 220V	AC 100~130V	AC 200~250V
Steady current (A)	≤ 3	≤ 2.5	≤ 3	≤ 2.5
Control voltage fluctuation range	70~110%		85~110%	

Optional components for CB mechanism

1 CB motor

With the external power source, it charges the closing spring of CB. When charging is completed, the motor's control power is switched "OFF" by a built-in Limit S/W.

12/17.5/24/36kV RMU CB Motor							
Rated voltage(Vn)	DC 24~30V	DC 48~60V	DC 110V	DC 220V	AC 48V	AC 100 ~ 130V	AC 200 ~ 250V
Load current(A)	≤ 5	≤ 3	≤ 1	≤ 0.5	≤ 3	≤ 1	≤ 0.5
Starting current(A)	5 times the load current						
Charging time	(5 seconds or less) Charge						
Charge completion contact	10A at 250VAC						

2 CB closing coil

A control device to trip CB in a remote place; it closes a circuit breaker by operating the coil when voltage is continuously applied or instantaneously supplied (200ms or more).

12/17.5/24/36kV RMU CB Closing Coil							
Rated voltage(Vn)	DC 24~30V	DC 48~60V	DC 110V	DC 220V	AC 48V	AC 100 ~ 130V	AC 200 ~ 250V
Power consumption(W) Upon operation(Inrush)	200						
Power consumption(W) normal condition	≤ 5						

3 CB trip coil

- A control device to trip CB in a remote place; it trips a circuit breaker by operating the coil when voltage is continuously applied or instantaneously supplied (35ms or more).
- UVT Coil not applicable when a double trip coil is chosen

12/17.5/24/36kV RMU CB Trip Coil							
Rated voltage(Vn)	DC 24~30V	DC 48~60V	DC 110V	DC 220V	AC 48V	AC 100 ~ 130V	AC 200 ~ 250V
Power consumption(W) Upon operation(Inrush)	200						
Power consumption(W) normal condition	≤ 5						

4 CB auxiliary contact

- A contact used to remotely monitor ON/OFF status of a circuit breaker.
- The auxiliary contact consists of 4a4b

12/17.5/24/36kV RMU CB Auxiliary Contact					
Type			Resistive load		Inductive load
Minimum current			DC5V, 1mA		
Contact capacity	AC	490V	5A		2.5A
		250V	10A		10A
		125V	10A		10A
	DC	250V	3A		1.5A
		125V	10A		6A
		30V	10A		10A

Under Voltage Trip device: Instantaneous type (Under Voltage Trip device: UVT)

UVT coil rated voltage and characteristics

- A device that automatically trips CB when the main line or control power voltage drops below the defined range. It is attached inside a circuit breaker.
- When no control power is supplied to UVT, CB's electrical and mechanical closing is not possible. For CB tripping, 65~85% of the rated voltage should be applied to both ends of the UVT coil.
- When the UVT Coil is selected, a double trip coil cannot be chosen. Thus, the trip coil location should be changed
- Dual trip coil can not be selected when UVT coil is selected and the trip coil position must be changed

12/17.5/24/36kV RMU CB UVT Coil						
Rated voltage (Vn)		Operating voltage range(V)		Power consumption (VA or W)		Trip time (ms)
DC(V)	AC(V)	Pick Up	Drop Out	Inrush	Steady-state	
24~30	-	0.65~0.85 Vn	0.4~0.6 Vn	200	≤ 5	50
48~60	48					
100~130	100~130					
200~250	200~250					

Note) Operating voltage range is the minimum rating standard of each rated voltage (Vn)

CB Remote Reset Switch: RES (Remote Reset switch: RES)

- It is an optional attachment that resets a circuit breaker in remote places when CB trip has occurred by OCR(Over Current Relay) owing to fault current.
- When a trip alarm(AL) switch is used, CB trip occurs. For CB re-closing, the circuit breaker should be mechanically reset. such mechanical reset operation is possible with a switch in remote places.
- When the circuit breaker is reset with a micro-switch inside the circuit breaker, it automatically breaks the current supplied to the coil inside a remote reset switch(RES). For safety, it is recommended to use a push button switch the operation switch. <Recommended specifications of the push button switch> (resistive load)
- AL2 and RES cannot be used simultaneously. Thus, there is only one option, either AL2 or RES.

Rated voltage and operating current of RES

12/17.5/24/36kV RMU CB RES Coil			
Rated voltage (Vn)		Operating current (Max)	
AC 110~130V		AC	6A
AC/DC 110~125V		DC	5A
AC/DC 200~250V		AC / DC	3A
Operating time			
40ms or less			

CB-Trip alarm contact (Trip Alarm Contact: AL)

- When a Circuit Breaker is tripped by OCR which operates against the fault current(Over Current Relay), Trip Alarm switch provides the information regarding the trip of Circuit Breaker by sending the electrical signal from the mechanical indicator on main cover of main Circuit Breaker or internal auxiliary switch. (Installed at the inside of Circuit Breaker)
- When a Circuit Breaker is tripped by fault current, a mechanical trip indicator(MRB, Manual Reset Button) pops out from the main cover and the switch(AL) which sends control signal electrically is conducted to output the information occurred from fault Circuit Breaker
- MRB and AL can be operated only when tripped by OCR, but doesn't be operated by Off button and OFF operation of trip coil.
- To re-close a Circuit Breaker after a trip, press MRB to reset it for closing.
- 2pcs of electrical trip switch(AL1, AL2, 1a) are provided(Optional)
- Trip alarm contact and MRB(Manual Reset Button) need to be purchased together
- AL2 and RES cannot be used simultaneously. Thus, there is only one option, either AL2 or RES

Electrical characteristics of a trip alarm contact

12/17.5/24/36kV RMU CB Trip Alarm Contact					
Rated voltage (V)	Non-inductive load(A)		Inductive load(A)		Inrush current
	Resistive load	Lamp load	Inductive load	Motor load	
8V DC	11	3	6	3	Max. 24A
30V DC	10	3	6	3	
125V DC	0.6	0.1	0.6	0.1	
250V DC	0.3	0.05	0.3	0.05	
250V AC	11	1.5	6	2	

MRB (Manual Reset Button)

- It is a function which resets a Circuit Breaker manually when a Circuit Breaker is tripped by OCR.
- When a Circuit Breaker tripped by fault current, a mechanical trip indicator (MRB, Manual Reset Button)pops out from the main cover and the switch(SDE) which sends control signal electrically is conducted to output the information occurred from fault Circuit Breaker.
- MRB can be operated only by OCR but not by OFF operation of Circuit Breaker, To re-close a Circuit Breaker after a trip, press MRB to reset it for closing.

Safety Instructions

- For your safety, please read user's manual thoroughly before operating.
- Contact the nearest authorized service facility for examination, repair, or adjustment.
- Please contact qualified service technician when you need maintenance.
Do not disassemble or repair by yourself!
- Any maintenance and inspection shall be performed by the personnel having expertise concerned.

- According to The WEEE Directive, please do not discard the device with your household waste.
